Purivox bird control handheld laser is a Manually used bird control device. By the green laser beam, most birds (geese, cranes, pigeons, gulls, and more) have the feeling that something is moving in their immediate environment.

The range in cloudy skies is about 2 kilometers.

The hand laser can optionally be equipped with a folding handle, a red dot sight for easy aiming with the hand laser.

- **Easy to use**
- **Effectively**
- **Great coverage**
- **Time savings** (in comparison if you have to drive or walk just before the birds, that they startle)

Laserstrahlung
nicht dem Strahl aussetzen
Laser Klasse 3B

Klassifiziert nach DIN EN 60825-1/10.2014
